Dear Hiring Team,

Cutting pilot changeover time by 18 percent and assembly escapes by 31 percent came from the same discipline this role demands: designing fixtures that work reliably under production conditions, then releasing documentation that lets teams execute without hand-holding. At Northforge Instruments I own that cycle end to end, from CAD through ECO package, with manufacturing and quality involved at every stage.

At Meridian Motion Labs I refreshed an enclosure design that lifted first-pass pilot completion from 84 to 95 percent by tightening stack-up control and simplifying cable routing. A separate fixture for battery module repair reduced setup time by 27 percent through hard-stop alignment features, with the full drawing pack released in a single revision cycle.

I have not worked in retail fixture or furniture environments, and my vendor management experience has been domestic rather than international.

I would welcome the opportunity to discuss the role further.

Kind regards,

**Avery Rowan**
